

Fig. 1.

Fig. 2.

(a) Prompt Gamma Neutron Activation Analysis

Neutron + nucleus = nucleus with extra neutron + characteristic gamma ray

The photon (gamma) that is emitted has a characteristic wavelength (color) that identifies the element.

(b) Delayed Gamma Neutron Activation Analysis

Neutron + nucleus = activated nucleus with extra neutron
 which emits a characteristic gamma ray when it decays

Bulk Material Property Analysis with Neutrons

(c) Neutron Energy before Entering Material

(slight energy scattering due to neutrons passing through neutron generator)

(d) Neutron Energy after Passing through Material

(marked energy scattering due to material properties)

(e) By comparing neutron fluxes before and after passing through the material, various material properties can be calculated, including density, thickness, porosity, and moisture content.

Key for Symbols Used in Figures 7, 9, and 33

electron	gaseous discharge particle has energy for collision (above thermal equilibrium)
positive ion (such as deuterium)	collision
fast neutral (such as deuterium)	neutron
background gas (such as deuterium)	helium-3
